# *instructions for padded thigh strap kit*

Kit to fit all Perception sit-on top kayaks

This kit contains the following:

2x padded thigh straps - with swivel clips attached

**PLEASE READ THESE INSTRUCTIONS CAREFULLY BEFORE FITTING!**

## Step 1 - Position the thigh straps

Arrange the thigh straps as shown in the picture with the curved sides facing out.

## Step 2 - Attach the thigh straps

Attach the thigh straps by clipping them onto the deck loops. The front deck loops are located by the footwell and the rear deck loops are positioned level with the back of the seat. NB - Some deck loops may have shared uses.

## Step 3 - Before heading to the water

Sit on the kayak on dry land and bring the padded straps over the legs. Alter the position of the strap by tensioning or loosening the webbing through the ladder-lock buckles. Position the padded part of the strap so it sits comfortably across your legs and provides support.

Practice exiting from the straps before taking to the water - simply straightening your legs should free you from the straps when you wish to exit the kayak. Alternatively you may wish to slide the straps away from your leg by hand. Ensure the buckles are securely fastened before taking to the water. Regularly rinse all clips and buckles to remove sand, grit and salt water, which may affect working parts.

**DO NOT USE THE THIGH STRAPS TO CARRY THE KAYAK!**
