# *instructions for fitting a paddle leash*

## Kit to fit paddle leash to any accessory attachment point

This kit contains the following:

1x Perception paddle leash

### PLEASE READ THESE INSTRUCTIONS CAREFULLY BEFORE FITTING!

#### Step 1 - Leash position

The paddle leash is designed to attach to the centre accessory attachment loop in front of the water bottle recess. NB - If your kayak does not have this deck fitting, you may use another deck loop. Some deck loops may have shared uses.

#### Step 2 - Find attaching loop

One end of the paddle leash will be a fixed loop. Pass this loop through the accessory attachment point you wish the paddle leash to be attached to.

#### Step 3 - Secure the leash

Now pass the adjustable end of the leash through the loop at the other end and pull tight. The looped end should now be securely wrapped around the accessory attachment point.

#### Step 4 - Before heading to the water

Use the adjustable hook and loop fastening on the leash to secure your paddle by wrapping around the middle of the paddle shaft. DO NOT wrap the paddle leash around any part of your body. Ensure the leash is securely fastened before taking to the water. Regularly rinse all clips and buckles on your kayak to remove sand, grit and salt water, which may affect working parts.

Please note that the paddle leash is not intended to keep you attached to your kayak. When in surf you should keep hold of your kayak if you capsize NOT your paddle leash.

**DO NOT USE THE PADDLE LEASH TO CARRY THE KAYAK!**
